Figure 1. A schematic diagram of the experimental setup. The subject is seated in a chair, viewing a screen. The screen displays a target (a small circle) and a starting point (a larger circle). The subject's hand is positioned at the starting point. The distance between the starting point and the target is labeled as d . The subject is instructed to move their hand from the starting point to the target. The movement is recorded by a video camera. The screen is divided into two regions: a starting region and a target region. The starting region is defined by a circle of radius r centered at the starting point. The target region is defined by a circle of radius r centered at the target. The distance between the centers of the two circles is d . The subject's hand is initially at the center of the starting circle. The subject is instructed to move their hand to the center of the target circle. The movement is recorded by a video camera. The screen is divided into two regions: a starting region and a target region. The starting region is defined by a circle of radius r centered at the starting point. The target region is defined by a circle of radius r centered at the target. The distance between the centers of the two circles is d . The subject's hand is initially at the center of the starting circle. The subject is instructed to move their hand to the center of the target circle. The movement is recorded by a video camera.
